

System custom built to your site requirements

20 years tank warranty

10 Colorbond® colours to choose from

Using rainwater to flush your toilets

Using rainwater to flush your toilets can save approximately 20,000 Litres of water every year. This saving is equivalent to the water used in:

 1350 dishwasher loads

 200 x 10-minute showers

 310 washing machine loads

A mains backup device integrated into our AquaSwitch kit systems ensures that if you have no water in the tank, your supply will switch back to mains so you can still flush your toilets. As an extra bonus, you can also connect the tank to your washing machine to save even more water.

...and it only uses the power equivalent to running your oven for 3 minutes a day!
